緒 論

岩槻(1997)はその著書「文明が育てた植物たち」において人類による搅乱環境下で繁殖する無融合生殖(シダ類の無配生殖を含む)種等、自殖種の拡大を訴えている。本研究は自然環境下でいかにして無配生殖を含む自殖性が進化したかオニヤブソテツを材料にして解析した。

オニヤブソテツ *Cyrtomium falcatum* (L. f.) C. Presl はオシダ科ヤブソテツ属の一種で、日本を中心と東アジアに広く分布している。日本では北海道南部以南の海岸から内陸にかけて多様な環境に普通に見られ、変異又は可塑性(Plasticity)の大きな種とされてきた(田川 1959, 倉田 1963, Sato 1984, 倉田・中池 1987)。常緑耐寒性の丈夫なシダで古くから観葉植物として栽培され、欧米(Jermy *et al.* 1978, Lellinger 1985)やオセアニア地域(Jones and Clemesha 1981, Wagner, Jr. 1981)では逸出して帰化植物となっている。ところで、本種は無配生殖の研究材料としてオオバノイノモトソウ *Pteris cretica* (イノモトソウ科)と共に古くからかかわってきた。すなわち、受精せずに配偶体の体細胞から胞子体が直接形成される。この現象を De Bary (1878) によって, Apogamy(無配生殖)と名づけられ、また Manton (1950) はミヤマワラビ *Phegopteris connectilis* (ヒメシダ科)も含め、真性無配生殖種(Obligate Apogamous Species)の代表として非減数性胞子形成(Diplospory)の仕組みを細胞学的に研究した。筆者はこれら広分布種の生態的意義や分類を困難にしている原因などを探るため、有性生殖型も見つかっている日本を中心とした東アジアで野外調査を進めてきた。モンスーン気候の東端の日本列島は湿潤な気候だけでなく、季節風、移動性低気圧、台風または人の活動などによる植生破壊が随所に見られ、ミヤマワラビは亜高山、オオバノイノモトソウは人里、オニヤブソテツは海岸の不安定な環境に無配生殖型が生育し、有性生殖型(種)との交雑も見つかり、分類を困難にしている実態が判明してきた(松本 1976, 1982, Matsumoto 1982, 松本・矢野 1989, 志村ら 1978)。葉縁に細鋸歯が無いという特徴で区別されるオニヤブソテツには細胞学的に3倍体無配生殖型: B (Mehra and Loyal in Mehra 1961, Abraham *et al.* 1962, Mitui 1968, Bhavanandan 1981, 中池・松本 1990), だけではなく2倍体有性生殖型: A1 (Mitui 1980, 松本・志村 1985, 安田 1987), A2 (Mitui 1973) 及び4倍体有性生殖型: C (Mitui 1965, Weng and Qiu 1988, Tsai and Shieh 1975, Shimura *et al.* 1978) の計4型が報告された[4倍体無配生殖型の報告(Tsai and Shieh 1985)があるが未確認]。分類学的には Thunberg が長崎で採集した2種類の標本(var. α , β)のうち var. α がオニヤブソテツ種で、これを本属のタイプとし、また、Koidzumi (1932) が別種としてやや内陸部にも分布するナガバヤブソテツ *C. devexiscapulae* (Koidz.) Ching を記載した時、上記の var. β を従基準標本(Paratype)としている。中国の Ching (1936) や Shing (1965) はこの種を認めたが、日本ではオニヤブソテツの変種、品種、さらに区別されないものとなっていた。このようにオニヤブソテツは複合種の可能性があり、細胞学的データと合わせた分類学的研究が望まれていた。

そこで本研究は Manton が明らかにした Diplospory で、1胞子囊中 64 個の代わりに 1 個の胞子ができる性質をメルクマールにして、日本列島の海岸の裸地から林床にかけて集団調査を行い、生育環境、外部形態および染色体数との関連を調べ、またハーバリウムの標本によりトト布を調べた結果、上記の基本的 4 型の生態的構造を把握できた。さらに混生地における雜種の低次倍数体無配生殖型(種)や分離による低次倍数体無配生殖型の形成を配偶体培養による生活史を通して認識した。またこれらの種分化を探るため、自然雜種や人工雜種の減数分裂の観察によるゲノム分析、無配生殖と自配自家受精の遺伝的背景及び有性生殖型の交配様式を探り、同一境下での栽培による外部形態の比較など種遺伝学的解析を行った。これらの結果を総合し、オニヤブソテツ複合種の繁殖様式と種分化に関する種生態学的考察を行った。

第1章 日本産オニヤブソテツの基本的4型

第1節 基本的4型の集団調査と生態的すみわけ

材料および方法

日本各地の海岸から内陸にかけて主に胞子の成熟する5～6月又は10～12月に胞子葉を集団サンプリングし、顕微鏡で胞子嚢中の胞子数の算定やシックネスダイアルゲージで葉の厚さを測り、また他の形質調査を行なうため標本を作製した。また同時に、または胞子数による判定結果から再度現地にて、染色体観察用さらに形態実験用に生株のサンプリングを行った。これらの証拠標本は国立科学博物館(TNS)におさめた。また住み分け環境の把握のため国土地理院の地図にプロットして解析を行い、その一部で植生調査も行った。染色体は減数分裂又は根端の体細胞分裂で観察した。減数分裂は若い胞子嚢のついた葉を1～2時間、5℃の水で前処理し、カルノア液(99%エタノール：クロロフォルム：氷酢酸=6:3:1)で固定、冷凍庫で保存し、酢酸カーミン押しつぶし法でプレパラートを作成した。体細胞染色体は勢いよく伸びている根を18～20℃の8オキシキノリンで4～4.5時間前処理し、酢酸アルコール液(1:3)で固定、冷凍庫に保存し、又は約5℃の45%酢酸で10～30分処理し、60℃の1N塩酸と45%酢酸混合液(1:1)に1分間つけて細胞を解離し、酢酸オルセイン押しつぶし法によった(高宮 1988)。観察した核板はミニコピーフィルムで撮影し、保存資料とした。

結果および考察

調査の結果、オニヤブソテツに基本的4型を認め、それぞれA1, A2, B, およびC型とし、Fig. 1-1にその概要を示した。これらの詳細な調査結果は以下の通りである。

伊豆半島の下田市、伊東市、南伊豆町および長崎市小瀬戸等で海岸から低山地にかけて詳細な集団調査を行なった結果、基本的4型のうち2倍体有性生殖のA1は岬の突端、海蝕崖の裸地に生育し、葉が厚く、通常葉長30cm以下で矮小形、3倍体無配生殖のBは主に海岸入江の草地や林縁のやや乾いた環境に生育し、葉質や葉長(30～90cm)に変異が大きく、4倍体有性生殖のCは低山地の谷や湿った林床に主として生育し、葉質薄く、60～100cmと最も大型となり、また他の3者と区別が容易で、同所的すみわけ分布が見られた(Figs. 1-2, 1-3, 1-4, および1-5, Table 1-1)。また長崎市小瀬戸はThunbergがオニヤブソテツの基準標本を採集した場所と推定され(Thunberg 1784, 外山 1977), BおよびC型のみが見られ、同様に住み分けていた(Fig. 1-5)。A2型は小笠原諸島、沖縄本島や九州南部および西部(福江島)で調査したが、主として岬のやや乾いた林床に生育し、葉が薄く、葉長40～70cmで、A1型とは異所的分布がみられた(Figs. 1-6, 1-7, 1-8 および1-9, Table 1-2)。またA2とB型も沖縄本島や鹿児島では異所的だが九州西部(福江島)では同所的すみ分けが見られた。無配生殖のB型を除くと有性生殖の3者は形態的に区別可能であった。

2倍体有性生殖型のA1とA2の生育地の植生景観をFig. 1-10に示す。このうちC図は伊東市城ヶ崎海岸でFig. 1-3およびTable 1-1の、D図は福江市でFig. 1-9の調査地域の写真である。このような生育環境の違いが特に葉のサイズと厚さの形態に反映していると考えられる。

植生遷移の3適応戦略の見地(Grime 1974)からA1は搅乱依存戦略(r-selection strategy), Bは競争戦略(competition s.), A2及びCは光に対するストレス耐性戦略(K-selection s.)をとっていると考えられる。

第2節 基本的4型の日本における分布

南北に連なる日本列島はそこに各サイトタイプなどの分布が載せられれば、それらの進化の実験場としてとらえる事ができる。上記の野外集団調査に加え、日本シダの会企画の標本に基づく全国分布図を載せた日本のシダ植物図鑑が発刊され(倉田・中池 1987)，この大規模な標本を中心に利用し、短期間に基本的4型の分布を得ることができた。

材料および方法

胞子嚢中の胞子数は野外集団では10個以上の胞子嚢で判定したが、標本からは5個前後で行った。標本から胞子嚢を針で紙に取り、斜めにして紙のふちをたたき、はじけていない胞子嚢を選別し、オイキットで封じてプレパラートを作成した。C型は上記の集団調査の結果から外部形態で区別できたので胞子の算定は大部分につき行なわなかった。分布図の作成の方法は上記、倉田・中池(1987)に従った。すなわち、マッピングインデックスとして、日本全国の五万分の一地図名と、それを4等分した位置(右上、右下、左上、左下の順にそれぞれ1, 2, 3, 4とする)を示し、図示した。

結果および考察

野外集団(255産地1928個体)、染色体観察数(186産地341個体)及びハーバリウム標本(TNS：国立科学博物館、一部RYU：琉球大学、TI：東京大学理学部、TOFO：東京大学農学部、Y：山口県立博物館などの892標本)の解析によりA1型が北海道南部から足摺岬、八丈島までの冷温帯から暖温帯に(Figs. 1-11, 1-12, 1-19, Appendix 1, 5), A2型は九州西部(福江島)および南部(佐多岬、野間岬)、小笠原諸島(伊藤 1944 参照)、屋久島、沖縄本島、与那国島、(台湾の蘭嶼)などの暖温帯から亜熱帯に偏り(Figs. 1-13, 1-14, 1-20, Appendix 2, 6), いずれも岬などに局地的分布をするのに対し、B型は青森～西表島、八丈島まで(Figs. 1-15, 1-16, 1-17, 1-20, Appendix 3, 7)、小笠原諸島では精査したが発見できず、台湾、韓国および中国南部にも分布確認)、C型は新潟県～鹿児島県(Figs. 1-18, 1-21, Appendix 4, 8)、濟州島、台湾、中国南部にも分布確認)などの暖温帯常緑広葉樹林帯を中心に、上記のように住み分けで普通に見られた。

第2章 自然交雑による倍数体の形成

第1節 有性生殖型と無配生殖型(種)の自然交雫による高次倍数体無配生殖型の形成

松本・志村(1985)は日本産ヤブソテツ属の無配生殖を含むすべての種に造精器をつけることを示し、オニヤブソテツ有性生殖型との混生地における雑種形成の可能性を提示した。志村ら(1978)はその5倍体雑種の1例[$C \times F$ (*C. caryotideum* (Wall. ex Hook. et Grev.) C. Presl: メヤブソテツ)]を示し、外部形態が中間形で胞子のサイズの変異が大きいことや不稔胞子を含む胞子嚢が多く作られること、無配生殖で繁殖することを示した。また中池(1992)は倉田(1963)の*C. fortunei* J. Sm. var. *fortunei*(ヤブソテツ)の概念を変え、檜山が*C. fortunei*の品種として記載したテリハヤブソテツを認識しやすいためから*C. laetevirens* (Hiyama) Nakaikeとして種にランクを上げた。これとオニヤブソテツC型との雑種をクマモトヤブソテツ $C \times kaii$ Nakaike in shed.として記録した(倉田・中池1994)。さらに1999年、岡 武利により横浜市金沢区でC型とミヤコヤブソテツ *C. fortunei* J. Sm. var. *intermedium* Tagawaの雑種と推定されるものが見つかり記録されている(山本2001)。

方 法

野外集団の調査において混生地における中間形を探索し、胞子嚢中の胞子数に加え胞子サイズの変異や不稔性胞子の存在などに注目し、染色体数を算定し雑種の判定を行った。また雑種におけるDiplosropyを行なう胞子嚢の割合、袋かけをして自然落下した胞子の発芽率、無配芽や造卵器、造精器形成の有無について調べた。この培養はシャーレに入れたハイポネックス0.1%寒天培地(pH: 6.5)に播種し、20℃、約2000ルックス、1日16時間の明所下で行った。発芽率の観察は播種後、2週間で行い、落下した胞子に対する発芽した胞子数で示した(不稔の程度が高いと胞子嚢がはじけないこともある)。配偶体は1サンプルに付き50個体前後を酢酸カーミンで染色し、放水クロラール・フォルマリン液に保存し、またプレパラートのマウント液としても利用し、顕微鏡で観察した。

結果および考察

伊豆半島南部の下田市においてオニヤブソテツの有性生殖型とヤブソテツ属の無配生殖種(3倍体)が混在する31ヶ所を調べた結果、15ヶ所で雑種が見つかった。それらはA1×B(4倍体)、C×B(5倍体)、C×D(5倍体、Dはテリハヤブソテツ)、C×E(5倍体、Eはヤマヤブソテツ)、C×F(5倍体、Fはメヤブソテツ)であった。これらの雑種形成率は有性生殖種間の不稔雑種形成率とあまり変わらず、野外では無配生殖で増えているように思えなかった(Table 2-1, Fig. 2-1)。同半島の伊東市、大仁町、松崎町および河津町、静岡市南部、三浦半島、鳥取県および熊本県などでもそれぞれの混生地の現地調査で雑種が見つかった(Tables 2-2~2-7, 2-10, Figs. 2-2~2-9)。有性生殖型間の3倍体雑種(A2×C)は不稔性の程度が高く減数分裂は16個の母細胞の段階でストップし、胞子嚢も未熟のままであった(Fig. 2-3A, B)。4倍体のA1×Bは非減数性胞子形成(32-spored sporangium: Diplosropy)だけでなく減数性胞子形成(64-spored sporangium: Haplosropy)も1個の多価染色体が形成されることがあるが胞子形成はほぼ正常であった(Fig. 2-2)。Table 2-10のC×B、C×D、C×Eはオニヤブソテツとして同定された分布図引用標本(倉田・中池 1987)から見出されたものである。またこれらの雑種の片親であるD、E、F種についても細胞学的の観

察をした結果、いずれも3倍体無配生殖型を確認した(Fig. 2-8, Table 2-9)。特に、筒井(1988)によりヤマヤブソテツ(E)と同定される種が形態的に4つに分けることが提唱され、そのうち雑種の推定親の3型(E1:光沢葉型:ヒラオヤブソテツ, E2:つやなし型:ツヤナシヤマヤブソテツ, E3:多羽片型:ホソバヤマヤブソテツとした)の染色体数を調べたことになる。これらの雑種はDiplosropy(8~58%)をおこない、発芽率がかなり高く(24~90%), 無配生殖で増殖し、造精器も形成していた(Table 2-11)。このほかにC×G(Gはミヤコヤブソテツ)も三浦半島で最近1株発見された(Table 2-8)。この染色体数のデータはないが孔辺細胞のサイズおよび胞子のサイズとその変異幅が大きいことから5倍体無配生殖型と推定され(Appendix 10), さらに無配生殖で多くの幼植物を得、造精器形成も確認した(Fig. 2-10)。

第2節 倍数性半数体無配生殖型の形成

自然雜種A1×B(2系統4株)は非減数性胞子だけでなく定型の減数性胞子も形成され、その割合も45~70%と高い。この減数性胞子を播いて(発芽率43.4~67.3%:Table 3-4), 有性生殖と無配生殖の配偶体が分離したが、無配生殖によって形成された胞子体は2倍体で、かつ無配生殖が固定し、4倍体から生まれた2倍体(Dihaploid:複半数体)である(Table 3-6)。この現象は顯花植物では知られているが(Nogler 1984), シダ植物では知られておらず、オニヤブソテツでも野外ではまだ発見されていない**。シダ類には2倍体無配生殖種が知られ、その起源について示唆を与えるものである。またこのDihaploidの配偶体の観察でも造精器が形成された(Table 2-12)。このことは混生地でA1またはA2と戻し交配が行われると3倍体無配生殖の新しいB型が生まれ、このようなサイクルによって変異が形成されることも示唆された。

** 沖縄県名護産の2倍体($2n = 82$)はFig. 1-14A-A, B, C, D, Eに示したA2'-115株のように32と64個の胞子をつけるのでDihaploidの野外における例と思われたが、8母細胞でも通常の減数した41の2価染色体が観察され、32個の胞子を形成するものと考えられた。この原因は胞子嚢が小さいため8個の段階で胞子母細胞が形成されたものと思われる。この証拠はFig. 1-14A-Eの胞子嚢を取り巻く環帶細胞数が胞子数64個の方は17に対し32個の方が14個と少ないことが上げられる。ホングウシダ科の胞子数が32個であるにもかかわらず通常の減数分裂を行うのは(Lin et al. 1990), 同じ原因が科のレベルで固定したものと推定される。

Table 2-1. Intra- or inter-specific hybridization of the genus *Cyrtomium* at the 31 sites (see Fig. 2-1) in Shimoda-shi, southern part of Izu peninsula (the number indicates a number of individuals of the population)

第3章 種遺伝学的解析

オニヤブソテツの基本的4型のゲノム構造を明らかにすることで系統関係を推定できる。特に、3倍体の**B**型と4倍体の**C**型のゲノム構造を知る必要がある。また種分化の要因となった無配生殖、自配自家受精 (Intragametophytic selfing) の遺伝的背景を探り、外部形態の特徴をほぼ同一条件下で育て、遺伝的性質として葉長、葉質をとらえた。また**C**型のゲノム構造を参考に**A1**, **A2**, **B**にない形質を探り当てた。また各倍数体を含むサイトタイプの同定のため胞子と孔辺細胞径を測定した。

第1節 人工雑種およびゲノム分析

ゲノム分析のため、以下の組み合わせでハイポネックス 0.1% 寒天培地において人工雑種を作成した。

2倍体雑種 **A1 × A2** は **A1-55** (下田市爪木崎、灰褐色の胞膜) の雌性配偶体の造卵器形成部位に **A2-2** (小笠原父島、マーカーとして胞膜が黒褐色の株を使用) の雄性配偶体を置いて灌水を行なった結果、25個体中 92% の成功率で **F1** ができた (Appendix 12)。**F1** の減数分裂は正常で発芽率が 56.2 ~ 98.4% と高かった。

3倍体雑種 **C × A1** は **C -31** (静岡市石部) の配偶体 (20個体) の造卵器形成部位に **A1-13** (下田市爪木崎) の雄性配偶体を置いて作出、20株の幼植物中栽培管理の失敗で1株のみが得られ不稔性の3倍体であった (Appendix 12)。

4倍体雑種 (**A1 × B**) × **C** は **A1 × B** の減数性胞子と **C** の胞子を混播した結果、6系統 64 個体の子孫を得て、その 15% にあたる 2 系統 **H1**, **H2** は雑種であった (Table 3-1)。**H1** (10 個体) は不稔性の4倍体、**H2** (7 個体) は無配生殖をする4倍体で、**C** と **A1 × B** の有性配偶体との受精で **H1**、無配生殖配偶体の精子との受精で **H2** ができたものと推定される。

自然雑種および上記の人工雑種でゲノム分析に利用した材料を Table 3-2 に示した。無配生殖をする雑種でも Sexual Meiosis を観察することができる。

解析結果を Table 3-3 に示した。各雑種の Sexual Meiosis の代表的データを示すと **A1 × A2** は 41 II, **A1 × B** は 1IV + 80 II (Dihaploid は 1IV + 40 II, 40 II + 3I + 1f), **B-159** (Sexual Meiosis の高頻度系統) は 24 III + 17 II + 17 I, **A1 × B × C** は 24 III + 17 II + 57 I, **A1 × C** は 41 II + 41 I, **B × C** は 2IV + 78 II + 41 I, **C × D** は 2IV + 4 III + 75 II + 36 I, **C × E** は 3V + 1IV + 13 III + 59 II + 29 II, **C × F** は 1IV + 2 III + 68 II + 59 I で、これより各型のゲノムは **A1**, **A2** が AA, **B** が AAA と同質3倍体, **C** が AABB の異質4倍体と推定された (Figs. 3-1 ~ 3-5)。この3倍体は2倍体の**A1**、または**A2**と4倍体の**C**との交雑由来ではなかった。**C**型はオニヤブソテツのAゲノムと未知のBゲノム種 [テリハヤブソテツ (**D**), ヤマヤブソテツ (**E**) およびメヤブソテツ (**F**) はBゲノムを含む3倍体と推定された]との交配によって成立したものと考えられる。

第2節 無配生殖の遺伝的背景

材料および方法

自然雑種 **A1 × B** の胞膜色の異なる 2 系統 4 株を材料にし (Table 3-4), 減数性胞子を分離し、0.1% ハイポネックス寒天培地に播種して、無配生殖と有性生殖の配偶体の分離比を求めた (Fig. 3-6)。

結果および考察

その結果、実験値は統計的に理論値1:1に合値し、優性の単性メンデル遺伝することが判明した(Table 3-5, Fig. 3-7)。無配生殖を行ったF2の胞子形成は25株中24株がDiplosporyを行い無配生殖と連鎖がみられ(Table 3-6), Agamospory(Obligate Apogamy)は超遺伝子(Super Gene)の可能性があり、その2遺伝子の距離は生育不良、不稔性や枯死個体もあり、不明である。無配生殖が優性の1遺伝子で支配されていることはシダ植物では初めての発見である。

ワラビの誘導無配生殖を行った研究ではスクロース存在下でのみ8日間の誘導期間でエチレンに反応して胞子体が誘導されることがわかっている(Elmore and Whittier 1973, 1975)。今回発見した遺伝子は無配生殖のスイッチを入れる働きが想定されるが、エチレン生合成に関与するメチオニンサイクルなどのスイッチ遺伝子の可能性がある。またDiplosporyに関して、Mehra and Bir (1960)は3倍体無配生殖種のウスバクジャク *Asplenium cheirosorum* Kunze ex Mett. を研究し、Dopp-Manton 様式のAgamosporyの理解をさらに深めた。それは減数分裂で相同染色体のペアリングは起こらず、1回細胞分裂が省略され、倍数核ができるとき染色体が複製されて4重になり(Auto-bivalents)，これがたかも2価染色体のように2回続けて起こる分裂で4個の娘細胞に分配される *Allium odorum* Kar. et Kir. の研究例(Hokansson and Levan 1957)を引用し、ウスバクジャクもこれと同じ現象とした。オニヤブソテツのDihaploidはこの問題を追及する良い材料になるであろう。

第3節 有性生殖型の交配様式とその遺伝的背景

シダ類には造卵器と混在して造精器をつける配偶体(混在型)とそうでない配偶体(分離型)があり、前者は自配自家受精を、後者は他配他家、又は他配自家受精を主として行い、前者は倍数体に多いとした(Masuyama 1975, 1982, 1987)。

材料および方法

栽培されている各地の有性生殖A1, A2, C型および人工雜種A1×A2の胞子を材料にした(Tables 3-8, 3-9)。

方法はFig. 3-7に示した。シャーレに入れたハイポネックス0.1%寒天培地に胞子を播く(条件は前出)。2ヵ月後、幅2-3mmとなった配偶体を実体顕微鏡でのぞきながらピンセットで1個体ずつ取り出し、予めエタノールと蒸留水で洗浄したフリージングコンテナに0.1%ハイポネックス液のバーミキュライト培地で9~10ヵ月間単離培養した。この培地は熱消毒冷却後これに詰め、器を振動させると表面が水平になるので、これに40穴の仕切り板を押し込んで、この穴に配偶体を植え付けた。週1回スポットで灌水して胞子体を形成させ自殖率を求めた。一方、生殖器官の観察のため培養3ヵ月後、配偶体を管瓶に取り酢酸カーミン染色後、水洗し、放水クロラール・フォルマリン液で保存、またこの液でプレパラートのマウントをした。

結果および考察

胞子を寒天培地に播いて3~4ヵ月後の配偶体の観察結果から、2倍体のA2と4倍体のCは分離型、2倍体のA1は分離型から混在型まで頻度に段階が見られた(Tables 3-8, 3-9)。次に混在型(A1)と分離型(A2)の人工雜種(中間型)のF2分離比はそれぞれ106:98=1:1であったが

(Table 3-7, Fig. 3-8), 上記 A1 の中間型は 71.9 ~ 76.7, 38.0 ~ 39.1, 16.9 ~ 27.8% といろいろな分離比を示しながらも 3 グループに分けられそうである。すなわち理論値 75, 50, 25 に比較的近い値と推定できるので、独立遺伝する 4 つの量的遺伝子を想定可能である。S 型は AAAA (0%), I 型は AAAa (25%), AAaa (50%), Aaaa (75%), M 型は aaaa (100%) となる。ただ再現性がないこともあり、ゆっくり成長させる培養条件の検討が必要である。

日本列島において南方型の A2 の他殖型から伊豆七島から伊東にかけて A1 の他殖型を一部含みながら自殖性への展開が北の北海道、南の紀伊半島南部、四国に見られた (Fig. 3-11)。

このような例は 4 倍体であるがミズワラビの南方型（他殖、多年生、正常サイズ、安定した池）と北方型（自殖、1 年草、矮性、水田のかく乱環境）の分化 (Masuyama 1992, 1996, Masuyama and Watano 1990), ハワイの林から溶岩の流れた裸地にかけて生育する非パイオニアとパイオニアのシダでは他殖型から自殖型への割合が高くなること (Lloyd 1974), さらに世界に広く分布するワラビにおいて大陸では他殖が、ガラパゴス諸島では高い自殖率が知られている。移住 (Migration) に際し、自殖で侵入し、時間がたって集団が大きくなると他殖性に変わるのでなかろうか。八丈島や伊東市城ヶ崎海岸の A1 型の集団は大きく、葉のサイズも大きいものがあり、これは移住後、時間がたって他殖性の遺伝子が進入、増加したためではないであろうか。

自配受精テストは主として 40 サンプルの単離した配偶体を週一回受精のための灌水を行なつて 9 カ月間培養し、胞子体を得た。混在型は 100% 近い自配受精を行なうが、分離型や中間型は胞子体形成が 2 ~ 3 カ月遅れて、0 ~ 95% まで見られ変化に富んでいた。分離型の A2 の自殖率は大部分が 50% 以下で遺伝的荷重 (Genetic load) が大きいためと推定され、よって他殖性を示し、C 型の多くは 50% を越え、他殖もするが、時間がたてば自殖も行い、遺伝的荷重は A2 よりも小さい (Figs. 7-3, 7-4)。ただし伊東市城ヶ崎海岸の A1 の分離型 2 系統について 1 個の配偶体をいくつかに切り、そのまま培養すると 100% の自殖率が得られたので遺伝的荷重はなく、一度雌になると雌雄同体になりにくいだけで、この母集団は劣性致死遺伝子の蓄積がない若い集団かもしれない。

第 4 節 外部形態に関する種遺伝学的解析

ほぼ同一条件のビニールハウス内で 2 年以上栽培し、外部形態を調べた結果を羽片の幅に対する長さの比と葉長の分散図に落とすと、有性生殖型の A1, A2, C はほとんど相互に重ならないが、無配生殖型の B がこの間を埋め、区別をつきにくくしていた。A1 は A2 より葉長が短く、葉質もより厚いなど大きな差がみられ、C は A2 より羽片の長さと幅比が大きく区別される (Fig. 3-18)。オニヤブソテツは環境変異の大きな種とされていたが、移植実験でも基本的 4 型の野外で観察された草丈や葉質など、それぞれの特徴は遺伝的なものであった (Figs. 3-12, 3-13, 3-16, 3-17)。胞膜は A2 と C が黒褐色、まれに灰白色だが A1 は灰白色、A1, 特に C は A2 よりその径が大きい (Appendix 5, 6, 7, 8, 9)。八丈島や伊東市の A1' は海蝕崖だけでなく、林縁や人家の石垣等にもみられ、移植実験でも大型となって A2 と似てくる (Figs. 3-14, 3-15, 8-3)。A2, B, C 型は播種後、成熟するまで少なくとも 3 年近くかかるのに対し、A1 型は一年で成熟し、第 6 葉目の幼形の単葉で胞子をつけた (Fig. 3-19)。野外でも海食崖の洞窟の入口など出よく見られるが、これは幼形成熟の一つ、Progenesis (Guerrant 1982) と考えられる。さらに羽状葉にもなるが、矮性で羽片数が少なく、裸葉羽片数がほとんどないことも Progenesis と考えられる (Figs. 3-12B, 3-13A)。中国雲南省には石灰岩に生育する森林性で単葉の *Cyrtomium hemionitis* Christ が知られていて、それと近縁、又は同一種とされる *C. fengianum* Ching & Shing は羽状葉である。Mitsuta (1977) はヤブソテツ属幼植物の網状脈離の発生を調べ、上記中国の単葉植物の進化について論じた。オ

ニヤブソテツの A1 型の単葉形成と似ており、平行進化と考えられる。このような例はチャセンシダ科ではホウビシダ *Asplenium hondoense* Murak. et Hatan. とヒメタニワタリ *Asplenium cardiophyllum* (Hance) Baker およびヒノキシダ *Asplenium prolongatum* Hook. とオオタニワタリ、トキワシダ *Asplenium yoshinagae* Makino とホコガタシダ *Asplenium ensiforme* Wall. ex Hook. et Grev. (Murakami *et al.* 1999), ヌリトラノオと *Asplenium speluncae* Christ (松本・岩科未発表), メシダ科ではナチケシダ *Deparia petersenii* (Kunze) M. Kato とヘラシダ *Deparia lancea* (Thunb. ex Murray) Fras.-Jenk. (Matsumoto and Nakaike 1990, Sano *et al.* 2000) が上げられる。筆者は亜熱帯～暖温帯にかけ、主に樹上、又は岩上などの着生植物に共通して単葉への進化がみられるのは強い日射と季節的乾燥などと、幼形進化のひとつ Progenesis とのかかわりで形成されたものと考える。

C型の羽片の先端付近にはまれに鋸歯がみられ、さらに幼葉では顯著であること、C型およびC型を片親とする雑種の若い葉の上面には早落性の小鱗片(多細胞毛状)が点在し、Aゲノムのみを有する A1, A2, B型には見られないこと、日本産ヤブソテツ属の他種にはすべてこれらが見られることから、C型はオニヤブソテツ種とは異なる種とすることが可能である (Fig. 3-20, Table 3-11)。

オニヤブソテツ複合種のサイトタイプを同定するため、孔辺細胞と胞子のサイズを測定した。孔辺細胞サイズは生材料を乾かないようにビニール袋で維持し、下から第二番目の羽片基部側 3 分の 1 の場所にセメダインを平らに塗って乾燥後、セロハンテープで裏打ちしてスライドグラスに貼り付ける簡易スンプ法を行った。胞子は直接オイキットで封入し、周皮を含めない Exospore の直径を測定した。結果は Appendix 10 に示した。体細胞と胞子細胞の倍数性と測定結果はよく一致していた。乾燥標本と比較すると、ややその湯戻しの方のサイズが大きくなるが、これを物差しにしてハーバリウムの乾燥標本の、特に無融合複合種(体)の解析に利用可能である。

Table 3-1. Artificial F1 hybrids by mixing both the spores of C type and the 64 spores of A1 × B type

♀	♂	C type 2X sex, ●	A1 × B type 2X sex, ○	A1 × B type 2X apo, ○
C type 2X sex, ●		C type (33) sex, ●	H1(10) 4X ste, ●	H2(7) 4X apo/ste, ●
A1 × B type 2X sex, ○			B1(3) sex, ○	B2(3) apo/sex, ○

Forming six race including two kind of hybrid (H1 and H2). The H1 (10 individuals) is sterile tetraploid, but the H2 (7 individuals) is apogamous tetraploid. ●: black indusium, ○: white indusium, sex: 64 spores in a sporangium, apo: 32 spores in a sporangium, ste: sterile spores.

第4章 オニヤブソテツ複合種の繁殖様式と種分化に関する種生態学的考察

第1節 生態構造と種分化

種生態学的研究によって明らかにしたオニヤブソテツ複合種の基本的4型の生態構造を図示し、種遺伝学的解析によって明らかにした種分化の過程を述べ、適応戦略と繁殖戦略との関係を考察し、生物学的実態を明らかにした。

横軸に海蝕崖の裸地から林床までの植生遷移を、縦軸に緯度と温量指数から植生帯をとり、4型をこれに乗せた。植生遷移から林床が光に対するストレス耐性戦略(K-Selection Strategy), 林縁から草地が競争戦略(Competition S.), 海蝕崖はかく乱依存戦略(r- Selection S.)に対応する(Grime 1974, Fig. 4-1)。

ヤブソテツ属の主な種はヒマラヤから日本にかけて照葉樹林帯の林床に生育している。その中から海岸に進出したオニヤブソテツの起原型と同じAAゲノムを持ちA1に比べて特殊化の程度の低いA2と推定した。すなわちA2(光に対するストレス耐性戦略者)は亜熱帯を中心に分布し、大型で葉質が薄く、海岸林床性で、胞膜は集団中に黒褐色のものが大部分だが灰白色のものもあり、他殖性の傾向を示すのに対し、A1(搅乱依存戦略者)は温帶に進出し、葉は多肉質で矮小化が進み、幼形の単葉でありながら胞子囊群をつけるものもあり、生活環が短縮し(幼形成熟Progenesis), ニッヂエの空いていた海蝕崖に、遺伝的浮動(Genetic drift)により胞膜が灰白色の系統のみが特殊化したものと考えられる。また自配自家受精(Intragametophytic selfing)は1個の胞子で子孫を残せるため海蝕崖という不安定な環境下では有利で、矮小化によって洞などの岩壁の微環境にも生育できる体制と伴って急速に北海道まで分布を広げたものであろう(一次的種分化)。A2とA1の分布接点付近の八丈島やその北方、伊東市の集団の一部は胞膜が灰白色だが林縁に生育し、大型で他殖の傾向があり、集団が大きいので自殖から他殖にもどったものと推定される。

次に2倍体のA1, A2型が岬などに極限的分布するのに対し、倍数体のBとC型は暖温帯常緑広葉樹林帯を中心に、海岸とそれに続く低山地の谷などに住み分けて普通に見られた。BとCは自殖可能で、野外でもBはスピーディに、Cは他殖できないときは自殖によって繁殖を行っていると思われる。また剛健な生育をするのは以下のように遺伝的にヘテロ性が強いためであろう。低山地林床性のC型(光に対するストレス耐性戦略者)はゲノム分析の結果や葉上面の小鱗片の存在から、二次的種分化としてA2型とヤブソテツ群の種との雑種起源の種と推定される。無配生殖のB型(競争戦略者)も二次的に形成された同質3倍体と推定され、しかも外部形態が2倍体のA1からA2型に似たものまで変異が見られ、一元的ではないように思われる。これに関して、A1やA2とB型の混生地で無配生殖型の精子による雑種、その分離によるDihaploid, そしてバッククロスが行われると $3X \rightarrow 4X \rightarrow 2X \rightarrow 3X$ とサイクルを形成する可能性があり、上記の変異に示唆を与えるものである。また無配生殖の遺伝子(優性)が一遺伝子的分離をすることから、容易にこれらの遺伝子を獲得できるものかもしれない。一度獲得したものが雑種を作ると、それが固定し、高次倍数体の無配生殖種または型を作り、一方、減数性胞子による分離から、低次倍数体の無配生殖型が形成され、さまざまな二次的種分化を起こして複雑化していくものと推定された。

適応戦略と繁殖戦略の立場から見ると、A1は植生が破壊され変動する環境に生活するため、性を放棄して自殖し、幼形で生殖成長に変わり生活環を短縮している。B型は光と土壤養分など資源が豊富なため、競争の世界で生きている。同質だが3倍体という遺伝的ヘテロによって剛健な性質と大きな変異を持ち、性を止めたスピーディな無配生殖によって競走に打ち勝ち、また乾燥に耐える性質も備えていることは海岸林縁に生活するのに有利である。

一方、**C** と **A2** は陰地性で乾性と湿性の差はあるが、ゆっくりと栄養成長するため病気のアタックを受けやすく、特にウイルス病など病気抵抗性を維持するために、有性生殖を行う必要があると考えられている。**A2** が林床で他殖を行うためには時々地表面が裸地化する必要があり、台風などによる林のギャップが必要となるため、この影響の出やすい岬の突端に分布が局限されるのではないだろうか。しかし劣性突然変異を蓄積しやすく、遺伝的荷重が大きいため、集団が小さくなると絶滅し易くなる。**C** 型は種間雑種起源のためヘテロ性が強く、他の胞子が近くに発芽するまで待って他殖し、来ないときは遺伝的荷重が少ないため自殖可能で内陸部に広がっている。

オニヤブソテツのゲノム **A** (葉が厚く、全縁で光沢がある) は **C** 型を通してヤブソテツ属の他種との交雑により内陸部に浸透し、外部形態的に区別しにくい高次倍数体無配生殖型を形成していくた。

第2節 種生態学的検討によって得られたオニヤブソテツ複合種の分類

Thunberg の採集した *Cyrtomium falcatum* (L. f.) C. Presl はその基準標本产地と推定される長崎市小瀬戸の調査、およびタイプ標本の形態を検討した結果 **B** 型に (Fig. 4-2), 本種のシノニムとされていた *C. devexiscapulae* (Koidz.) Ching のタイプ標本 (濟州島産) は胞子も葉上面の小鱗片も落ちて確認できないが、他の外部形態では **C** 型に相当し、異質 4 倍体であるので別種としてこの学名を生かし、また新たに *C. falcatum* の亜種として **A1** (subsp. *littorale* S. Matsumoto), **A2** (subsp. *australe* S. Matsumoto) を認めた。さらに無配生殖型を片親とする 5 つの種間雑種は繁殖力があるので種の扱いにすべきもので、上記新 2 亜種を含め、新 7 分類群記載の準備中である。

Taxonomy of *Cyrtomium falcatum* complex

Original species

- Cyrtomium falcatum* (L. f.) C. Presl
- subsp. *falcatum* (**B** type, 3x apo.) "Oni-yabusotetsu"
- subsp. *littorale* S. Matsumoto (**A1** type, 2x sex.) "Hime-oni-yabusotetsu"
- subsp. *australe* S. Matsumoto (**A2** type, 2x sex.) "Munin-oni-yabusotetsu"
- C. devexiscapulae* (Koidz.) Ching (**C** type, 4x sex.) "Nagaba-yabusotetsu"

Natural hybrid origin

- C. falcatum* subsp. *littorale* × subsp. *falcatum* (**A1** × **B**, 4x apo. and sex.)
"Atsuba-oni-yabusotetsu"
- C. devexiscapulae* × *C. falcatum* subsp. *falcatum* (**C** × **B**, 5x apo.)
"Ai-oni-yabusotetsu"
- C. devexiscapulae* × *C. atrovirens* (**D**) (**C** × **D**, 5x apo.)
"Nagaba-yabusotetsu-modoki" (Kumamoto-yabusotetsu)
- C. devexiscapulae* × *C. fortunei* var. *clivicola* (**E**) (**C** × **E**, 5x apo.)
"Mamushi-oni-yabusotetsu"
- C. devexiscapulae* × *C. caryotideum* (**F**) (**C** × **F**, 5x apo.)
"Nagaba-me-yabusotetsu"
(**C** × *pseudocaryotideum* Shimura, Matsumoto & Yamamoto nom. nud., 1978.

C. devexiscapulae × *C. intermedium* (G) [C × G, (5x?) apo.]

"Nagaba-miyako-yabusotetsu"

Artificial hybrid

C. falcatum subsp. *littorale* × subsp. *australe* (A1 × A2, 2x sex.)

C. devexiscapulae × (*C. falcatum* subsp. *littorale* × subsp. *falcatum*)

[C × (A1 × B), 4x apo. and 4x sterile]

C. devexiscapulae × *C. falcatum* subsp. *littorale* (C × A1, 3x sterile)

Dihaploid yielded from tetraploid hybrid

C. falcatum subsp. *littorale* × subsp. *falcatum*

(A1 × B /2, 2x apo.)

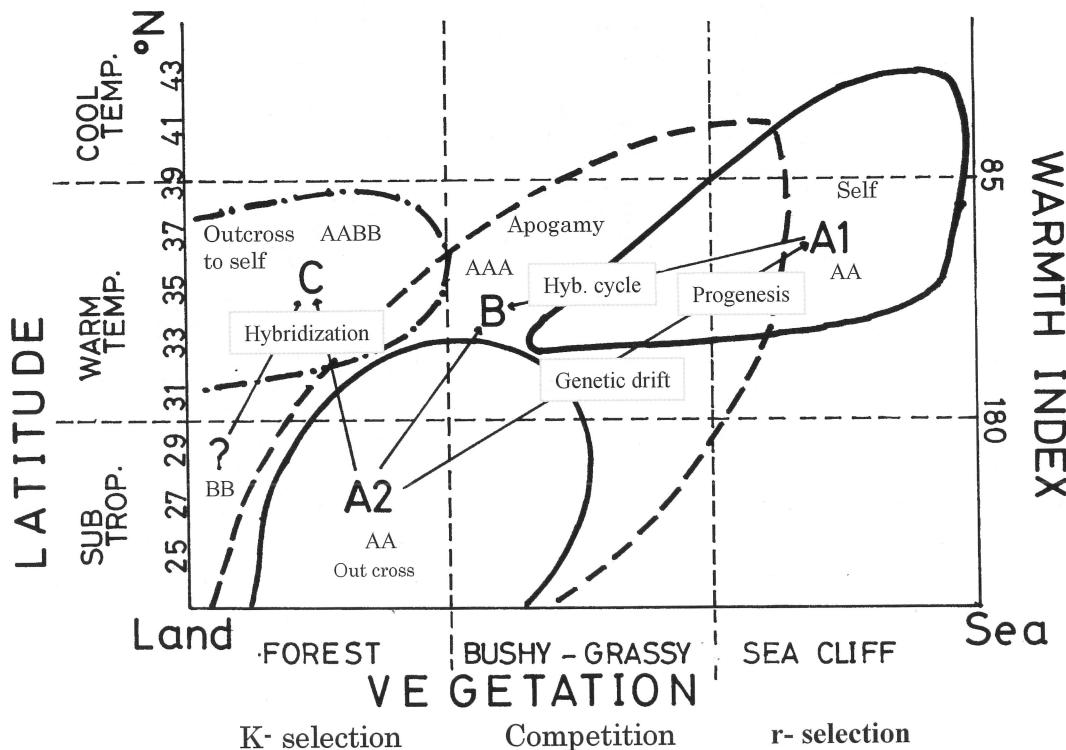

Fig. 4-1. Ecological structure and speciation on basic 4 cyto-types of *Cyrtomium falcatum* complex in Japanese Archipelago.

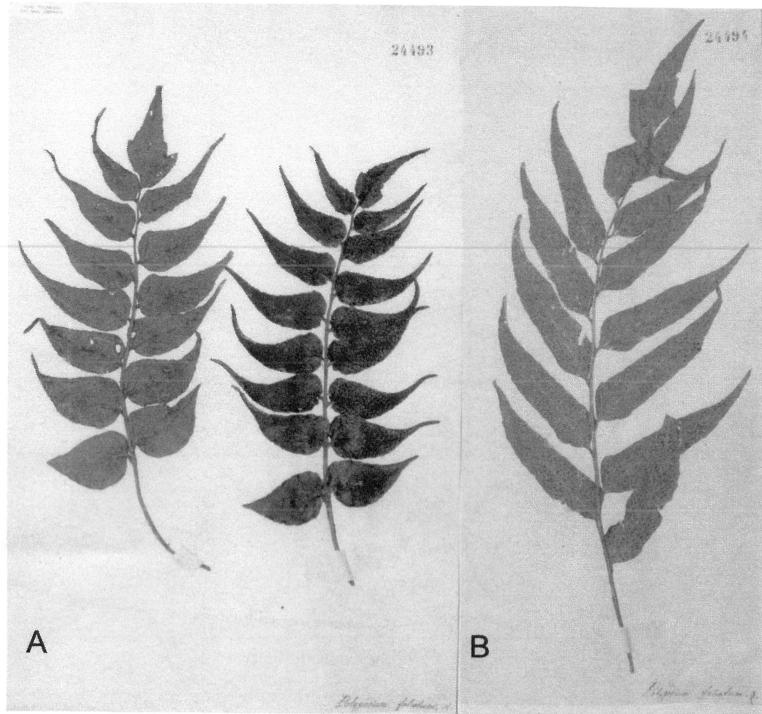

Fig. 4-2. Two kinds of specimens on *Cyrtomium falcatum* deposited in Uppsala University of Sweden collected by Thunberg from Nagasaki at 1776. **A:** Holotype of *Cyrtomium falcatum* (L. f.) C. Presl (*Polypodium falcatum* α). **B:** Paratype of *Cyrtomium devexiscapulae* (Koidz.) Ching (*Polypodium falcatum* β).

Summary

The ornamental fern, *Cyrtomium falcatum* (L. f.) C. Presl native in Eastern Asia naturalized coastal region of the warm-temperate zone in the world. The chromosome number for cytotypes on 186 localities (341 individuals) and the spore-number per sporangium for reproductive mode on 794 localities (2,467 individuals including herbarium specimens and population samples) in Japan were surveyed. Four cytotypes, two sexual diploid (**A1**: dwarf, **A2**: normal), one sexual tetraploid (**C**) and one apogamous triploid (**B**) were mainly recognized.

In central Japan, **A1**, **B** and **C** types show that the habitat segregation among sea-cliff, coastal grassy ground and forest floor are sympatric. While, **A1** and **A2** types show that the geographic segregation between northern part and southern part in Japan are allopatric.

And also, several polyploid hybrids were recognized at contact zones of each cytotype and another apogamous triploid species. There are one sterile triploid (**A1** × **C**), one apogamous and sexual tetraploid (**A1** × **B**) and four apogamous pentaploid [**C** × **B** (♂), **C** × **D** (**D**: *C. laetevirens* (Hiyama) Nakaike: ♂), **C** × **E** (**E**: *C. fortunei* (J. Sm.) var. *clivicola* (Makino) Tagawa: ♂), **C** × **F** (**F**: *C. caryotideum* (Wall. ex Hook. et Grev.) C. Presl: ♂)]. The polyhaploid (apogamous dihaploid) was gotten from reduced spores (64 spores in a sporangium) of the tetraploid (**A1** × **B**). This apogamous dihaploid considered to make variation of **B** type as donor of sperm by backcross (hybrid cycle: 3x to 4x to 2x to 3x).

Artificial hybrid for genome analysis were synthesized as follow, fertile diploid (**A1** × **A2**), sterile triploid (**A1** × **C**) and sterile and apogamous tetraploid [**C** × (**A1** × **B**)]. Sexual meiosis of all hybrids including natural apogamous hybrids and dihaploid were analyzed for the basic 4 types, **A1**, **A2**, and **B** types were same genome as AA, AA and AAA respectively, but **C** type was allotetraploid having AABB (see Fig. 3-5).

On the genetic background of agamospory, the apogamy was considered to be one dominant gene from the segregation ratio of gametophytes to originate in reduced-spores of tetraploid hybrid, **A1** × **B**. And also linkage of apogamy and diplospory genes considered as to be present, for reason to show diplospory on the almost dihaploid.

On the variation of mating systems, ratio of the gametangium formation (mix or separate antheridia with archegonia) and sporophyte formation by intragametophytic selfing test were investigated on the **A1**, **A2** and **C** types, and one hybrid **A1** × **A2**. **A2** and **C** were separate types, but **A1** was variable from separate to mix type and the hybrid was intermediate type with the half ratio. Sporophyte formation of the mix types including parent (**A1**) of the hybrid were high frequencies by self-fertility, but that of separate types were low in **A1** and **A2** types of diploid or relatively low in **C** type of tetraploid. And also sporophyte formation of separate types later one month than that of mix type.

On the comparative study under the cultivation, dwarf form of **A1** type specialized genetically from **A2** type was considered as 'Progenesis'. The shape of **B** type intermediates between **A1** and **A2** types. While, **C** type was distinguished from another types with shape of pinna and presence of micro-scale on upper surface of frond.

Correlation of the ecological structure and speciation on basic 4 cytotypes of *Cyrtomium falcatum* complex in Japanese Archipelago were considered from viewpoint of species ecological study (see Fig. 4-1). Most basic **A2** type growing subtropical maritime forest with cross mating evolved under K-selection. The **A1** type growing warm and cool temperate sea-cliff evolved under r-selection from **A2** type, as follows, the first by genetic drift, migrating only grayish indusium strain with self mating, the second by progenesis, shorten the life cycle from three years or more to one or two years. Most widely spread **B** type growing the coastal forest edge with apogamous reproduction evolved by hybridization at several

times or by hybrid cycle from **A2** and **A1** types under competition environment. The C type growing warm temperate wetly forest floor evolved under K-selection, by hybridization between **A2** type and unknown another species of *Cyrtomium*.

Taxonomy of basic 4 types on *Cyrtomium falcatum* complex was as follows by examination of two holotype specimens.

- Cyrtomium devexiscapulae* (Koidz.) Ching (C type)
- C. falcatum* (L. f.) C. Presl subsp. *falcatum* (B type)
 - subsp. *littorale* S. Matsumoto (A1 type)
 - subsp. *australe* S. Matsumoto (A2 type)

謝 辞

学位論文審査に当たり、多大なご指導を賜った主査の中村武久東京農業大学名誉教授に心より感謝申し上げます。また副査の河原輝彦同大学教授、岡田早苗同大学教授、天野實同大学助教授および中池敏之千葉県立中央博物館副館長の方々にはご専門の立場からご指導を受け、ここに感謝の意を表します。本調査のきっかけを作っていた静岡県下田市の元下田中学校教諭笠本岩男氏、材料の収集にご協力いただいた日本シダの会会員の岡 武利、古賀伸一郎、細倉哲穂、山下正文及び山本幸憲各氏、富山中央植物園中田政司氏、長崎県農業試験場の寺井理治氏、熊本大学の高宮正之助教授、及び国立科学博物館筑波実験植物園の小西達夫園長及び八田洋章、平山良治、岩科 司、遊川知久各主任研究官、ならびにデータ作成や材料の維持管理にご援助いただいた日本シダの会会員の藤本沙由美氏に感謝の意を表します。標本調査を許可していただいた国立科学博物館植物研究部 (TNS)、東京大学 (TI, TOFO)、京都大学 (KYO)、山口県立博物館 (Y)、琉球大学 (RYU) のハーバリウム管理者の方々にも感謝いたします。また最後になりましたが長期にわたる本研究の継続に多大なご援助いただいた故近藤典生東京農業大学名誉教授、故志村義雄静岡大学教授、また黒川 道氏を始めとする矢野義治、手塚映男、橋本 保および小西達夫筑波実験植物園歴代園長に感謝いたします。

[Tomie-1] Fukue Isl., Fukue-shi, Sakiyama-bana (A2-87, 98, 99, 100, 101)	64(5)	
Same loc. (A2-102)	64(1)	2n = 82
[Tomie-1] Fukue Isl., Fukue-shi, around Mt. Mitake (A2-104)	64(1)	
Same loc. (A2-103)	64(1)	2n = 82
[Tomie-1] Fukue Isl., Fukue-shi, Sakiyama-Shiozu (A2-88, 105)	64(2)	2n = 82 (1), n = ca.41 (1)
[Tomie-3] Fukue Isl., Fukue-shi, Kamisakiyama (A2-94)	64(1)	
Same loc. (A2-95, 96)	64(2)	2n = 82 (2)
[Tomie-3] Fukue Isl., Fukue-shi, Abunze (A2-106)	64(1)	2n = 82
[Tamano-ura-1] Fukue Isl., Tomie-cho, Nagamine (A2-107)	64(1)	2n = 82
[Tamano-ura-1] Fukue Isl., Tamanoura-cho, Arakawa (A2-111)	64(1)	
[Tamano-ura-3] Fukue Isl., Tamanoura-cho, Osezaki (A2-108)	64(1)	
Same loc. (A2-109, 110)	64(2)	2n = 82 (2)
Kagoshima pref.		
[Sata-misaki-2] Sata-cho, Sata-misaki, on mountain slope under bush and trees faced sea, alt. ca. 100 m (A2-36, 38, SM901210-12 ~ 29)	64(19)	
Same loc. (A2-13)	64(1)	n = 41
Same loc. (A2-35, 37)	64(2)	2n = 82 (2)
[Makura-zaki-4] Makurazaki-shi, Yamatatsugami, on rock wall of seaside and on floor of bush, alt. 2-5 m (A2- 28 ~ 32, 34, SM901209- 9 ~ 14)	64(12)	
Same loc. (A2-27, 33)	64(2)	2n = 82 (2)
[Noma-dake-1] Kasasa-cho, Bansho to Taniyama, on mountain slope of roadside under bush and trees faced sea, alt. ca. 100 m (A2-21, 24, SM901208- 1 ~ 5, 10 ~ 18)	64(15)	
Same loc. (A2- 20 ~ 23)	64(3)	2n = 82 (3)
[Noma-dake-1] Kasasa-cho, Noma-hanto, on mountain slope of roadside under bush and trees faced sea, alt. ca. 100 m (SM901208- 21 ~ 38, & pinna samples)	64(42)	
Same loc. (A2-25, 26)	64(2)	2n = 82 (2)
[Okino-erabu-4] Okino-erabu Isl., China-cho, Kamishiro (A2-85)	64(1)	2n = 82
[Okino-erabu-4] Okino-erabu Isl., China-cho, Tamina-saki (A2-86)	64(1)	2n = 82
[Yoron-to-2] Yoron Isl., Yoron-cho, Gusuku (A2-81)	64(1)	
Same loc. (A2-80)	64(1)	2n = 82
[Yoron-to-2] Yoron Isl., Yoron-cho, Izen (A2-82 ~ 84)	64(3)	2n = 82 (3)
Okinawa pref.		
[Oku-2] Kunigami-son, Oku, alt. 15 m, on mountain slope by grave-yard (A2-59, SM911127- 67, 68)	64(3)	
Same loc. (A2- 60)	64(1)	2n = 82
[Oku-2] Kunigami-son, Ginama, on floor of seashore forest (A2-57, SM911127- 55 ~ 57)	64(5)	
Same loc. (A2-56)	64(1)	2n = 82
[Oku-4] Kunigami-son, around light-house of hedo-misaki, alt. 50 m, on floor of bush of Cycas (SM911127- 59 ~ 64)	64(6)	
Same loc. (A2-58)	64(1)	2n = 82
[Hetona-2] Kunigami-son, Awa, on mountain slope of seaside (A2-61)	64(1)	2n = 82
[Hetona-3] Kunigami-son, Uka, on mountain slope by grave-yard fased sea (SM911127- 40 ~ 52)	64(13)	
Same loc. (A2-55)	64(1)	2n = ca.82
[Hetona-3] Kunigami-son, Iji, on cutting slope of roadside fased sea (A2- 53, 54, SM911127- 31 ~ 37)	64(9)	
Same loc. (A2- 10 ~ 12)	64(3)	n = 41 (3)
[Nakasone-2] Ogimi-son, Nerome, alt. 10 m, on mountain slope by roadside (A2-52, SM911127- 21 ~ 24)	64(5)	
Same loc. (A2-51)	64(1)	2n = 82
[Kunigami-heira-1] Higashi-son, Izena, on rock-wall of seaside (A2-62, SM911127- 72 ~ 80)	64(10)	
Same loc. (A2-63)	64(1)	2n = 82

-(continued)-

App. 2.

-(continued)-

[Kunigami-heira-3] Ogimi-son, Miyagi-shima, on rock-wall or mountain slope of seaside forest (A2-49, SM730719-5,7,10, 13,15,17, SM911127-12 ~ 20)	64(17)	
Same loc. (A2-50)	64(1)	2n = 82
[Kunigami-heira-3] Nago-shi, Kushibaru, on rock-wall or mountain slope of seaside forest (A2-47, 48, SM911127- 4 ~ 7)	64(6)	
Same loc. (A2-46)	64(1)	2n = 82
[Nago-1] Nago-shi, Awa, northern side of small isl. on forest floor (A2-40 ~ 42, SM911126-8, 9)	64(5)	
Same loc. (A2-39)	64(1)	2n = 82
[Nago-1] Nago-shi, Awa, left side valley of Ryukyu Cement Co. LTD., alt. 50 m, on crevice of rocky roadside (A2'-113, 114)	32 > 64(2)	2n = 82 (2)
Same loc. (A2'-115)	32 > 64(1)	2n = 82 (1), n = 41 (1)
[Yonaguni] Yonaguni Isl., Kindahana (A2-89, H. Hatta, Mar. 22, 1994)	64(1)	
Same loc. (A2- 90)	64(1)	2n = 82
[Yonaguni] Yonaguni Isl., Kukurabari (A2-91, 92, H. Hatta, Mar. 22, 1994)	64(2)	
Taiwan		
Taitung Prov.: Lanyu Isl. (A2-93, S. Masuda, Dec. 1988)	64(1)	2n = 82
Taitung Prov.: Lanyu Isl., Zhongai bridge (忠愛橋) [Jinn-Fen Chen (陳進分), SM00- 121, 122]	64(2)	
Total	57 localities (337 individuals)	52 localities (72 individuals)

*(N): a number of individuals, s/s: spore number per sporangium (64: 64 haplo-spores), 2n: chromosome number in mitosis, n: a number of bivalent in meiosis.

Appendix 3. List of locality and the cytological data on B type of *Cyrtomium falcatum* complex

Locality ([]: mapping index, B-: stock-culture number, SM: Matsumoto collection number)	Cytological Data* (N)	
	S/S	2n or n
Miyagi pref.		
[Kinkazan-3] Oshika-cho, Kinkazan Isl. (SM730923- 5, 6, 14)	32(3)	
Same loc. (B-82)	32(1)	2n = 123 (1)
Same loc. (B-81, 83, 84)	32(3)	n = 123 (3)
Ibaraki pref.		
[Otu-3] Kitaibaraki-shi, Izura-kaigan, on artificial rock-wall and grassy grounds of seaside (B-107, 108)	32(2)	
Same loc. (B-106)	31(1)	n = ca.123(1)
[Hitachi-1] Hitachi-shi, Tajiri-hama, on soil wall of seaside (SM831120-11 ~ 17)	32(7)	
Same loc. (B-72)	32(1)	n = 123(1), 16 c/s: 22III + 19II + 19I
[Naka-minato-4] Nakaminato-shi, Ajigaura, on rocky seashore (B-74 ~ 77)	32(4)	
Same loc. (B-73)	32(1)	n = 123 (1)
Chiba pref.		
[Mobara-2] Ichinomiya-cho (S. Matsumoto, July 13, 1971)	32(1)	
Tokyo pref.		
[Tokyo-nanseibu-1] Minato-ku, Shirogane 3-chome, on roadside (SM730120- 2)	32(1)	
[Kozu-jima] Kozu Isl., Kaeri-hama, on rock-wall of seaside (B-35, 37, S. Matsumoto, July 11, 1981)	32(6)	
Same loc. (B-36)	32(1)	2n = n = 123 (1), 16 c/s : 22III + 19II + 19I
[Kozu-jima] Kozu Isl., Mae-hama, on grassy ground near sea (S. Matsumoto, July 10, 1981)	32(3)	
[Miyake-jima] Miyake Isl., Usuki, on cutting slope of roadside near sea (B-39, 41)	32(2)	
Same loc. (B-38, 40)	32(2)	n = 123 (2)
[Miyake-jima] Miyake Isl., Sabiga-hama, on rocky ground of seaside (S. Matsumoto, July 6, 1981)	32(1)	
[Mikura-jima] Mikura Isl., on cutting slope of roadside (B-32, S. Matsumoto, July 10, 1981)	32(5)	
Same loc (B-33, 34)	32(2)	n = 123 (2)
[Hachijo-jima] Hachijo Isl., Borawazawa-kaigan, on artificial rock-wall faced sea (B- 101, S. Matsumoto, Jan. 27, 1989)	32(3)	
Same loc. (B-102)	32(1)	2n = 123 (1)
[Hachijo-jima] Hachijo Isl., Nakanogo to Kashitate, on cutting slopes of roadside (B- 105)	32(1)	
Same loc. (B-103, 104)	32(2)	2n = 123 (2)
[Hachijo-shozoku-shoto] Aoga-shima Isl., Yasumiya (B-191, T. Shimakawa)	32(1)	2n = 123(1)
Kanagawa pref.		
[Yokosuka-1] Yokosuka-shi, Kannon-zaki, on rock-wall and grounds near sea (S. Matsumoto, July 1, 1971)	32(10)	
[Misaki-1] Miura-shi, Ken-zaki, on rock-wall and grassy grounds of seashore (S. Matsumoto, July 15, 1972)	32,16(5)	
Niigata pref.		
[Aikawa-1] Sado Isl., Aikawa-cho, Senkaku-wan on rock-wall of seaside (B-157, 158)	32(2)	
Same loc. (B-156)	32(1)	n = 123(1)
[Aikawa-2] Sado Isl., Aikawa-cho, Tassyia, on mountain slope faced sea (B-109)	32(1)	
Same loc. (B-110, 111)	32(2)	n = 123(2)

-(continued)-

App. 3.

-(continued)-

Ishikawa pref.		
[Wajima-4] Monzen-cho, Minazuki, Nanaura-kaigan, on rock-wall and rocky, grassy, woody grounds of seashore (SM770502-1, 3, 17 ~ 20, 23, 30, 31)	32(9)	
Same loc. (B-80, SM770502-4)	32(2)	n = 123(2)
Fukui pref.		
[Mikuni-2] Mikuni-cho, Tojinbo, on rock-wall of seaside (S. Matsumoto, May 3, 1977)	32(1)	
[Mikuni-2] Mikuni-cho, Oshima, on rocky-ground of seaside (S. Matsumoto, May 3, 1977)	32(4)	
Same loc. (SM770503- 30, 32, 34)	32(3)	n = ca.123 (3)
[Fukui-3] Fukui-shi, Sugao (B-79, M. Nakata)	32(1)	
[Nishitsu-3] Mikata-cho, Umiyama, on cutting slope of roadside (B-78)	32(1)	n = 123 (1)
Shizuoka pref.		
[Ito-2] Ito-shi, Jogasaki, on rock-wall and rocky, grassy, woody grounds of seashore (B-53, S. Matsumoto, Dec. 31, 1975, May 15, 1976, May 8, 1977, May 29, 1977, May 19, 1980, June 15, 1980, May 11, 1988)	32(94)	
Same loc. (SM880511- 34)	32(1)	2n = 123 (1)
Same loc. (B-51, 52)	32(2)	n = ca.123 (2)
[Ito-2] Ito-shi, Jogasaki, on rock-wall and rocky, grassy, woody grounds of seashore, Tsunakiri (B-159)	32 : 64s/s = 36 : 40	2n = n = 123, 16c/s: 24III+17II+17I
[Inatori-3] Higashi-izu-machi, Inatori, on rock-wall and woody ground of seaside (S. Matsumoto, Aug. 19, 1972)	32(4)	
Same loc. (SM720819- 6)	32(1)	2n = ca.123 (1)
[Shimoda-2] Shimoda-shi, Kakisaki to Suzuki, on rock-wall and rocky, grassy grounds of seashore (S. Matsumoto, May 21, 1978, Oct. 7, 1987, Oct. 11, 1987)	32(13)	
Same loc. (B-93)	32(1)	n = 123 (1)
[Shimoda-2] Shimoda-shi, Soto-ura, on cutting slope of roadside faced sea (B-48, 50, 95)	32(3)	
Same loc. (B-49, 56)	32(2)	n = 123 (2)
[Shimoda-2] Shimoda-shi, Madoga-hama, back side of Hotel Buzansou (B-173)	32(1)	2n = 123 (1)
[Shimoda-4] Matsuzaki-cho, Kumomi, on rock-wall and woody ground (S. Matsumoto, Aug. 28, 1974)	32(5)	
[Mikomoto-jima-1] Shimoda-shi, Oura-kaigan, on cutting slope of roadside faced sea and roadside of human habitation (B-54, S. Matsumoto, Aug. 18, 1972, Oct. 4, 1981, Oct. 6, 1981)	32(47)	
Same loc. (B-55)	32(1)	n = 123 (1)
[Mikomoto-jima-1] Shimoda-shi, Suzuki, Ebisu Isl., on rock-wall of seashore (B-57)	32(1)	n = 123 (1)
[Mikomoto-jima-1] Shimoda-shi, Suzuki, Fuku-ura , on rock-wall of seashore (B-58)	32(1)	n = 123 (1)
[Mikomoto-jima-1] Shimoda-shi, Tsumeki-saki, on rock-wall and rocky, grassy grounds of seashore (B-112, 114, S. Matsumoto, Jan. 3, 1973, May 27, 1973, July 17, 1975)	32(40)	
Same loc. (B-113)	32(1)	n = 123 (1)
[Mikomoto-jima-1] Shimoda-shi, Kisami to Tatado-kaigan, on rock-wall and rocky, grassy, woody grounds of seashore (B-63, 65 ~ 68, 70, 94, S. Matsumoto, May 27, 1973)	32(19)	
Same loc. (B-59)	32(1)	2n = 123 (1)
Same loc. (B-60 ~ 62, 64, 69)	32(5)	n = 123 (5)
[Mikomoto-jima-3] Minami-izu-cho, Ose, on cutting slope of roadside faced sea and roadside of human habitation (B-42, S. Matsumoto, Dec. 26, 1972, May 16, 1976)	32(48)	
[Shizuoka-1] Shizuoka-shi, Hiramatsu, on artificial rock-wall near sea (S. Matsumoto, Apr. 21, 1973, May 20, 1973)	32(14)	
Same loc. (SM730520-2, 11)	32(2)	n = 123 (2)
[Shizuoka-1] Shizuoka-shi, Shikiji, on bank of roadside (S. Matsumoto, Aug. 30, 1973)	32,16(4)	
[Shizuoka-2] Shizuoka-shi, Sekibe, on artificial rock-wall along stream near sea (B-71)	32(1)	2n = n = 123 (1)
Mie pref.		
[Namikiri-1] Daio-cho, Daio-zaki, on rock-wall of seaside (B-87, 89 ~ 92, 96 ~ 99)	32(9)	

-(continued)-

App. 3.

-(continued)-

Same loc. (B-88, 100)	32(2)	n = 123 (2)
[Kimoto-4] Kumano-shi, Oniga-jo, on rock-wall of seaside (B-31)	32(1)	
Same loc. (B-30)	32(1)	n = 123 (1)
Wakayama pref.		
[Nachi-katsuura-1] Taiji-cho, Kantori-saki, on the ground of rocky seaside (B-198)	32(1)	2n = ca.123 (1)
[Nachi-katsuura-4] Koza-cho, on rock-wall in seaside forest (SM920920-13)	32(1)	
Same loc. (B-197)	32(1)	2n = 123 (1)
[Kushimoto-3] Kushimoto-cho, Shiono-misaki, on rock-wall of seaside (S. Matsumoto, Nov. 3, 1973)	32(11)	
Same loc. (B-196)	32(1)	2n = 123 (1)
[Kushimoto-3] Kushimoto-cho, Oshima Isl., on rock-wall and rocky ground of seaside (S. Matsumoto, Nov. 3, 1973, SM920920-1 ~ 3)	32(17)	
[Gobo-4] Mihamo-cho, Hino-misaki, on rock-wall and rocky ground of seaside (B-192, 194, 195)	32(3)	
Same loc. (B-193)	32(1)	2n = 123 (1)
Tottori pref.		
[Hamasaki-3] Iwami-cho, Uratomi-kaigan, on rocky, grassy woody grounds of seashore (S. Matsumoto, Apr. 1, 1972)	32(4)	2n = 123 (1)
Hiroshima pref.		
[Hiroshima-2] Hiroshima-shi, Ujina-jima, on woody ground (B-172)	32(1)	2n = 123 (1)
Tokushima pref.		
[Hiwasa-4] Hiwasa-cho, the end of highway "Minamiawa sun-line", on cutting slope of roadside faced sea (B-27, M. Nakata)	32(1)	n = ca.123 (1)
Kochi pref.		
[Muroto-misaki-3] Muroto-shi, Moto (B-115)	32(1)	n = ca.123 (1)
[Aki-1] Aki-shi, Nishino-hama, Oyama-zaki, on rock-wall of seaside (B-125, 126)	32(2)	
Same loc. (B-28, M. Nakata, B-124)	32(2)	n = 123 (2)
[Tosa-shimizu-1] Tosa-shimizu-shi, Ari-saki, on rocky ground of seaside (B-29, M. Nakata)	32(1)	n=123 (1)
[Tosa-shimizu-2] Tosa-shimizu-shi, Ashizuri-misaki, on rock-wall of seaside (B-123)	32(1)	n = 123 (1)
[Tosa-shimizu-3] Tosa-shimizu-shi, Tatsugushi, on rock-wall of seaside (B-121)	32(1)	
Same loc. (B-122)	32(1)	n = ca.123 (1)
[Tosa-shimizu-3] Otsuki-cho, Kosaitsuno-kaigan, on cutting slope of roadside faced sea (B-120)	32(1)	
Same loc. (B-119)	32(1)	n = ca.123 (1)
Nagasaki pref.		
[Nagasaki-3] Shikimi-machi, on rocky ground of seaside (B-26, H. Nakanishi)	32(1)	n = 123 (1)
[Nagasaki-4] Nagasaki-shi, around of Kosedo-cho, on rock-wall and rocky, grassy, woody grounds (B-128, 130 ~ 134, 140 ~ 143, S. Matsumoto, Nov. 24, 1989, Nov. 26, 1989)	32(127)	
Same loc. (B-127, 129)	32(2)	n = 123 (2)
[Nomo-zaki-3] Nomo-zaki, on cutting slope of roadside near sea (B-137, S. Matsumoto, Nov. 25, 1989)	32(29)	
[Nomo-zaki-3] Nomo-zaki, on rock-wall and rocky, grassy, woody grounds of seaside (B-136, S. Matsumoto, Nov. 25, 1989)	32(22)	
Same loc. (B-135)	32(1)	2n = 123 (1)
[Nomo-zaki-3] Kaba Isl., on rock-wall of seaside and cutting slope of roadside (B-138, 139, S. Matsumoto, Nov. 25, 1989)	32(29)	
[Fukue-4] Fukue-shi, Takada (B-227, O. Terai, Mar. 23, 1994)	32(1)	
[Fukue-4] Fukue-shi, Kamiotsu (B-237 ~ 239, O. Terai, Mar. 23, 1994)	32(3)	2n = 123 (3)
[Fukue-4] Fukue-shi, Nagate (B- 241, O. Terai, Mar. 23, 1994)	32(1)	

-(continued)-

App. 3.

-(continued)-

Same loc. (B-240)	32(1)	2n = 123 (1)
[Fukue-4] Fukue-shi, Toraku (B-248, O. Terai, Mar. 23, 1994)	32(1)	
Same loc. (B-249)	32(1)	2n = 123(1)
[Fukue-4] Fukue-shi, Minami-kawara (B-250 ~ 252, O. Terai, Mar. 23, 1994)	32(3)	
[Fukue-4] Fukue-shi, Kashinoura (B-253, 254, O. Terai, Mar. 23, 1994)	32(2)	2n = 123 (2)
[Tomie-1] Fukue-shi, Shimosakiyama (B-244, O. Terai, Mar. 23, 1994)	32(1)	2n = 123 (1)
[Tomie-1] Fukue-shi, Sakiyama-kou (B-245, O. Terai, Mar. 23, 1994)	32(1)	2n = 123 (1)
[Tomie-3] Fukue-shi, Kokuzo (B-228, O. Terai, Mar. 23, 1994)	32(1)	
[Tomie-3] Tomie-cho, Tao (B-230, 231, O. Terai, Mar. 23, 1994)	32(2)	
Same loc. (B-229, O. Terai, Mar. 23, 1994)	32(1)	2n = 123 (1)
[Tomie-3] Tomie-cho, Tanoe (B-232, 233, O. Terai, Mar. 23, 1994)	32(2)	
[Tomie-3] Tomie-cho, Tomie (B-234, O. Terai, Mar. 23, 1994)	32(1)	
[Tomie-3] Tomie-cho, Dake (B-235, O. Terai, Mar. 23, 1994)	32(1)	
[Tomie-3] Tomie-cho, Yamashita (B-236, O. Terai, Mar. 23, 1994)	32(1)	
[Tomie-3] Fukue-shi, Kamisakiyama-1 (B-242, O. Terai, Mar. 23, 1994)	32(1)	
[Tomie-3] Fukue-shi, North of Abunza (B-243, O. Terai, Mar. 23, 1994)	32(1)	2n = 123 (1)
[Tomie-3] Fukue-shi, Kamisakiyama (B-246, O. Terai, Mar. 23, 1994)	32(1)	
Same loc. (B-247, O. Terai, Mar. 23, 1994)	32(1)	2n = 123 (1)
Oita pref.		
[Sagaseki-3] Sagaseki-cho, Ohira, on stone wall of seaside (B-255)	32(1)	
[Sagaseki-1] Sagaseki-cho, Sekizaki, on rock wall of seaside (B-256 ~ 260)	32(5)	
[Tsuru-misaki-3] Tsurumi-cho, Tsuru-misaki, on rock-wall of seaside (B-261 ~ 263)	32(3)	
[Usa-1] Kakaji-cho, Nagasaki-bana, on rock-wall of seaside (B-267 ~ 269)	32(3)	
Same loc. (B-264 ~ 266)	32(3)	2n = 123 (3)
[Hime-jima-2] Kunimi-cho, Konpira-bana, on rock-wall of seaside (B-271, 272)	32(2)	
Same loc. (B-270)	32(1)	2n = 123 (1)
[Hime-jima-2] Kunimi-cho, Narahara, on rock-wall of seaside (B-273)	32(1)	
Miyazaki pref.		
[Hyuga-aoshima-2] Miyazaki-shi, Kochiumi, northern part of Kinchaku Isl. (SM911112-16, 17, T. Iwashina)	32(2)	
Same loc. (B-182, 183)	32(2)	2n = 123 (2)
[Obi-1] Nichinan-shi, Udo-zaki, on rock-wall of seaside (B-169 ~ 171)	32(3)	
Same loc. (B-168)	32(1)	2n = 123 (1)
[Obi-2] Nichinan-shi, Odotu, Inohana-zaki (SM911112-7 ~ 9, T. Iwashina)	32(3)	
Same loc. (B-176 ~ 181)	32(6)	2n = 123 (6)
[Shibushi-2] Kushima-shi, Takamatsu (B-175, SM911112-1 ~ 3, T. Iwashina)	32(4)	
Same loc. (B-174)	32(1)	2n = ca.123(1)
Kumamoto pref.		
[Misumi-2] Ariake-cho, Biro Isl., on rock-wall of seaside (B-155, M. Takamiya)	32(1)	2n = 123 (1)
[Minamata-2] Kawachi-cho (B-22 ~ 25, R. Hirayama)	32(4)	n = 123 (4)
[Ushibuka-4] Ushibuka-shi, Shimosu-jima, below Turuba-yama park, on seaside (B-201 ~ 208, T. Iwashina)	32(8)	
Same loc. (B-199, 200)	32(2)	2n = 123 (2)
Kagoshima pref.		
[Onejime-4] Nejime-cho, Nejime bay, on cutting slope of roadside (B-164)	32(1)	2n = 123 (1)
[Kaimon-dake-2] Yamakawa-cho, Yamakawa bay, on volcanic rock-wall in forest faced sea (B-163)	32(1)	2n = 123 (1)
[Sata-misaki-1] Sata-cho, Izashiki, on rock-wall of seaside (B-165)	32(1)	2n = ca.123 (1)
[Sata-misaki-2] Sata-cho, Shima-domari, on woody ground of seaside (B-167)	32(1)	
Same loc. (B-166)	32(1)	2n = ca.123 (1)
[Sata-misaki-3] Yamakawa-cho, Nagasaki-bana, on rock-wall of seaside (B-161, 162)	32(2)	
Same loc. (B-160)	32(1)	2n = 123 (1)

[Yakushima-tonanbu-4] Yaku Isl., Ono-aida, on rock-wall of seaside (B-18, 19, 20, 85, 86)	32(5)	
Same loc. (B-17)	32(1)	n = 123 (1)
[Kikai-jima-1] Kikai Isl., Kikai-cho, Oasato (B-217, T. Konishi & R. Hirayama, Feb. 27, 1994)	32(1)	2n = 123 (1)
[Kikai-jima-1] Kikai Isl., Kikai-cho, Onotsu (B-218, 219, T. Konishi & R. Hirayama, Feb. 27, 1994)	32(2)	
Same loc. (B-220)	32(1)	2n = 123 (1)
[Kikai-jima-1] Kikai Isl., Kikai-cho, Urahara (B-221, 222, T. Konishi & R. Hirayama, Feb. 27, 1994)	32(2)	2n = 123 (2)
[Kikai-jima-1] Kikai Isl., Kikai-cho, Shito-oke (B-223, T. Konishi & R. Hirayama, Feb. 28, 1994)	32(1)	
[Akagi-na-4] Amami-oshima Isl., Nase-shi, Yagijima (B-214 ~ 216, T. Konishi & R. Hirayama, Feb. 25, 1994)	32(3)	
[Yama-2] Tokuno-shima Isl., Kanami-zaki (B-212, T. Konishi & R. Hirayama, Feb. 25, 1994)	32(1)	
Same loc. (B-213)	32(1)	2n = 123 (1)
[Okino-erabu-3] Okino-erabu Isl., China (B-224, 225, T. Konishi & R. Hirayama, Feb. 28, 1994)	32(2)	2n = 123 (2)
[Okino-erabu-4] Okino-erabu Isl., Saozu (B-226, T. Konishi & R. Hirayama, Feb. 28, 1994)	32(1)	
[Yoron-to-2] Yoron Isl., Ritcho (B-209, T. Konishi & R. Hirayama, Feb. 23, 1994)	32(1)	2n = 123 (1)
[Yoron-to-2] Yoron Isl., Tujimiya, Yunmurakuen (B-210, T. Konishi & R. Hirayama, Feb. 23, 1994)	32(1)	2n = ca.121 (1)
[Yoron-to-2] Yoron Isl., Yoron-kou (B-211, T. Konishi & R. Hirayama, Feb. 23, 1994)	32(1)	2n = 123 (1)

Okinawa pref.

[Okinawa-nanbu-1] Katsuren-son, White-Beach (B-10, 12)	32(2)	
Same loc. (B-11)	32(1)	2n = n = 123 (1), 19 III + 24 II + 18 I
[Kukou-jima-3] Tamagusuku-son, Gyokusendo (calcareous cave), on rocky and woody ground (B-9, 188 ~ 190, SM74313-C, SM911201-5 ~ 10)	32(11)	
Same loc. (B-8, 187)	32(2)	n = 123 (2)
[Kukou-jima-3] Chinen-son, Kishiya (S. Matsumoto, Mar. 13, 1974)	32(2)	2n = n = 123 (2)
[Naha-2] Naha-shi, Shurei-mon (B-16, T. Nakaike)	32(1)	
[Nanboku-daito-jima-1] Kita-daito Isl., Nagamaku, on rock-wall (B-275, T. Nakamura)	32(1)	
[Iriomote-jima-seibu-4] Iriomote Isl., Funaura, on calcareous rock-wall of seaside (B-2, T. Konishi)	32(1)	2n = 123
Same loc. (B-1)	32(1)	n = ca.123 (1)
[Iriomote-jima-hokubu-4] Iriomote Isl., Sumiyoshi (B-7, T. Nakaike)	32(1)	
Same loc. (B-3 ~ 6)	32(4)	2n = 123 (4)
Total	115 localities (830 individuals)	82 localities (127 individuals)

*(N): a number of individuals, s/s: spore number per sporangium (64: 64 haplo-spores, 32: 32 diplo-spores), 2n: chromosome number in mitosis, n: a number of bivalent in meiosis.

Appendix 4. List of locality and the cytological data on C type of *Cyrtomium falcatum* complex

Locality ([]: mapping index, C-: stock-culture number, SM: Matsumoto collection number)	Cytological Data* (N)	
	S/S	2n or n
Chiba pref.		
[Mobara-2] Ichinomiya-cho, on forest floor along river (S. Matsumoto, Sept. 13, 1971)	64(2)	
[Kamogawa-1] Amatsu-kominato-cho, Mt. Kiyosumi, forest edge in vally (TBG13197)	64(1)	
Tokyo pref.		
[Tokyo-tohokubu-4] Chiyoda-ku, Hibiya Park on banks of stream (S. Matsumoto, Oct. 10, 1972)	64(12)	n = ca. 82 (3)
[Tokyo-tohokubu-4] Taito-ku, Ueno Park, on rock-wall in forest floor (SM921001-1, C-33, 34)	64(3)	
[Tokyo-seinanbu-1] Minato-ku, Shizen-kyoiku-en, on forest floor along stream (S. Matsumoto, Jan. 20, 1973)	64(2)	
Kanagawa pref.		
[Yokosuka-1] Yokosuka-shi, Kannon-zaki, on rock-wall in forest near sea (S. Matsumoto, July 14, 1971)	64(4)	
[Misaki-1] Miura-shi, Matsuwa, on forest floor of hill side (S. Matsumoto, July 18, 1972)	64(2)	n = 82 (1)
Shizuoka pref.		
[Numazu-2] Ohito-cho, Mt. Jo-yama, on forest floor of the vally (C-5)	64(1)	
[Shimoda-1] Kawazu-cho, Onabe, on mountain slope in forest (C-22, S. Matsumoto, Nov. 4, 1974)	64(2)	2n = 164 (1)
[Shimoda-1] Kawazu-cho, Otaki, on mountain slope in forest (S. Matsumoto, May 5, 1973)	64(3)	
[Shimoda-2] Shimoda-shi, Shikine, Mamushiga-kubo, on rocky forest floor (C-2, 3, 23)	64(3)	n = 82 (3)
[Shimoda-2] Shimoda-shi, Shimoda-cho, Kasuga-yama, on rocky forest floor (C-4, SM811005-4, 15, 20, SM880510-6 ~ 8)	64(6)	
[Shimoda-2] Shimoda-shi, Soto-ura, on bank of stream (C-6)	64(12)	2n = 164 (1)
[Shimoda-2] Shimoda-shi, Shiro-yama-koen, on rock-wall in forest floor (C-8, 25)	64(2)	2n = 164 (1)
[Shimoda-2] Shimoda-shi, Kaki-saki, on cutting slope of roadside in forest (C-24)	64(1)	
[Shimoda-2] Shimoda-shi, Shimoda-machi 1-chome (S. Matsumoto, Oct. 4, 1981)	64(3)	
[Shimoda-2] Shimoda-shi, Shimoda-machi 6-chome (S. Matsumoto, Oct. 6, 1981)	64(3)	
[Shimoda-2] Shimoda-shi, Shimoda-machi Hachiman-jinja (S. Matsumoto, Oct. 7, 1981)	64(2)	
[Shimoda-2] Shimoda-shi, Kami-osawa to Takohma (S. Matsumoto, Oct. 7, 1981)	64(3)	
[Shimoda-2] Shimoda-shi, mouth of Kami-osawa, left-side stream, on cutting slope of mountain road (C-39, 40)	64(2)	
[Shimoda-2] Shimoda-shi, Naka (S. Matsumoto, Dec. 31, 1972, Oct. 11, 1981)	64(5)	
[Shimoda-3] Matsuzaki-cho, Ikeshiro to Mt. Chokuro, on mountain slope (C- 47)	64(1)	
Same loc. (C-26)	64(1)	2n = 164 (1)
[Shimoda-3] Nishizuu-cho, Miyagahara, on mountain slope (C-1)	64(1)	2n = 164 (1)
[Mikomoto-jima-1] Shimoda-shi, Ora, on rocky forest floor (C-9, 11 ~ 13, 15 ~ 21, 35, 36, S. Matsumoto, Mar. 14, 1982, Oct. 4, 1981)	64(24)	
Same locality (C-10, 14)	64(2)	2n = 164 (2)
[Mikomoto-jima-1] Shimoda-shi, Tatado, on forest floor of the small valley (C-7)	64(1)	2n = 164 (1)
[Mikomoto-jima-4] Minami-izu-cho, Ose, on bank of valley and forest floor (frond specimen: SM760516-5, 6, 8, 9, 11 ~ 13, 17, 31, pinna specimen: 41 samples)	64(50)	
[Shizuoka-1] Shizuoka-shi, Hiramatsu, on artificial rock-wall near sea (SM730421-1, 2, S. Matsumoto, May 20, 1973)	64(12)	2n = 164 (1)
[Shizuoka-2] Shizuoka-shi, Sokusawa, on rocky bank of stream (SM730712-7, 12 ~ 14)	64(4)	
[Shizuoka-3] Shizuoka-shi, Makigaya to Ubume, on rocky mountain slope in forest (S. Matsumoto, Apr. 29, 1973, May 3, 1973)	64(10)	2n = 164 (1)
Same loc. (SM730429-11)	64(1)	n = 82 (1)
[Shizuoka-4] Shizuoka-shi, Sekibe, on artificial rock-wall along stream near sea (C-31)	64(1)	n = 82, 2n = 164

- [Kumoso-yama-2] Wajiki-cho, Hyochu-kannon (K. Abe, 1982, TNS)
 [Kumoso-yama-3] Kamiyama-cho, Mitsuki (K. Abe, 19 , TNS)
 [Sakuradani-1] Aioi-cho, Takegaya (T. Nakayama, 1970, TNS)
 [Sakuradani-3] Kaminaka-cho, Cho-an dam (T. Nakayama, 1967, TNS)
 [Wakimachi-2] Yamakawa-cho, Okunoi-gawa (K. Abe, 1973, TNS)
 [Tsurugi-san-1] Anabuki-cho, Furumiya (K. Abe, 1978, TNS)
 [Tsurugi-san-3] Sadamitsu-cho, Haba-yama (K. Abe, 1946, TNS)
 [Ikeda-2] Mikamo-cho, Gomyo (T. Nakayama, 1979, TNS)
 [Ikeda-4] Ikeda-cho, Satogawa valley (T. Nakayama, 1979, TNS)

Kochi pref.

- [Otochi-1] Monobe-mura, Sasagami (A. Minami, U. Fujiyama & Y. Suehiro, 1984, TNS)
 [Otochi-4] Kahoku-cho, Kawano-uchi mountain road (K. Yamaoka, 1982, TNS)
 [Tei-3] Kahoku-cho, Birafu (K. Yamaoka, 1979, TNS)
 [Kochi-1] Tosa-yamada-cho, Shingai (A. Minami, U. Fujiyama & Y. Suehiro, 1984, TNS)
 [Kochi-2] Noichi-cho, Otani (K. Yamaoka, 1983, TNS)
 [Kochi-3] Kagami-mura, Taniguchi to Sadanaga (K. Yamaoka, 1978, TNS)
 [Kochi-4] Kochi-shi, Jikoku valley (K. Yamaoka, 1979, TNS)
 [Ino-3] Gohoku-mura, streambranch of Kamiya river (Y. Yamamoto, 1984, TNS)
 [Suzaki-3] Tosa-shi, Kitahara, Chisho valley (K. Yamaoka, 1978, TNS)
 [Ishigabae-4] Nakatosa-cho, Kaezaki (S. Miyazaki, 1979, TNS)
 [Kamidoi-2] Niyodo-mura, Mori (K. Yamaoka, 1982, TNS)
 [Kamidoi-4] Agawa-mura, Oku valley (K. Yamaoka, 1984, TNS)
 [Nitta-1] Hayama-mura, Kaino-kawa (K. Yamaoka, 1978, TNS)
 [Oyo-3] Nishi-tosa-mura, Kitano-kawa mountain road (S. Miyazaki, 1985, TNS)
 [Iwamatsu-2] Sukumo-shi, around Sakamoto (K. Yamaoka & Y. Yamamoto, 1978, TNS)
 [Sukumo-1] Sukumo-shi, Nagahata (K. Yamaoka, 1983, TNS)

Ehime pref.

- [Ishizuchi-yama-3] Tanbara-cho, Kono-se (M. Hyodo, 1982, TNS)
 [Kami-doi-4] Yanadani-mura, Eiju (M. Hyodo, 1981, TNS)
 [Matsuyama-hokubu-2] Tanbara-cho, Yanaso (M. Hyodo, 1980, TNS)
 [Matsuyama-hokubu-4] Matsuyama-shi, Jikiba (M. Hyodo, 1982, TNS)
 [Matsuyama-nanbu-4] Tobe-cho, Miyauchi (M. Hyodo, 1981, TNS)
 [Tanono-3] Hiyoshi-mura, Kami-honmura (M. Hyodo, 1982, TNS)
 [Mitsuhama-2] Matsuyama-shi, Oyama-dera (Y. Miyoshi, 1978, TNS)
 [Mitsuhama-3] Nakajima-cho, Nakajima (Y. Miyoshi, 1978, TNS)
 [Gunchu-1] Iyo-shi, Mitani (M. Hyodo, 1982, TNS)
 [Oozu-1] Uchiko-cho, Kami-yokohira (M. Hyodo, 1983, TNS)
 [Oozu-3] Futami-cho, Houshi (M. Hyodo, 1980, TNS)
 [Oozu-4] Oozu-shi, Shinya (M. Hyodo, 1981, TNS)
 [Iyo-takayama-2] Uwakai-mura, Yagahama (M. Hyodo, 1981, TNS)
 [Uogami-yama-2] Tsushima-cho, Suge (M. Hyodo, 1981, TNS)

Fukuoka pref.

- [Uji-4] Kita-kyushu-shi, Moji-ku, Kitaku-kaigan (M. Ohno, 1983, TNS)
 [Nakatsu-1] Toyomae-shi, Tsunetomi, Nisho-gu shrine (S. Tsutsui, 1982, TNS)
 [Kokura-1] Kita-kyushu-shi, Moji-ku, Kazashi-yama (M. Ohno, 1983, TNS)
 [Gyobashi-1] Kita-kyushu-shi, Kokura-minami-ku, Hirao-dai, Senbutsu-do (S. Tsutsui, 1972 , TNS)
 [Gyobashi-3] Kita-kyushu-shi, Yahata-nishi-ku, Kongo-san (H. Ochiai, H. Harada & S. Tsutsui, 1985, TNS)
 [Gyobashi-4] Kawara-cho, Ryuga-bana (S. Tsutsui, 1975, TNS)
 [Tagawa-1] Tsuiki-cho, Shimo-fukaya (S. Tsutsui, 1983, TNS)
 [Yoshii-4] Haki-cho, Otoihi-gawa (H. Inoue, 1983, TNS)
 [Hida-3] Ukiha-cho, Saji-barai (H. Inoue, 1983, TNS)
 [Hida-4] Yabe-mura, Hyuga-gami dam (S. Tsutsui, 1981, TNS)
 [Orio-1] Kita-kyushu-shi, Wakamatsu-ku, Iwaya (S. Kobayashi, 1982, TNS)
 [Nogata-2] Miyata-cho, Mutsu-dake (S. Tsutsui, 1976, TNS)

-
- [Nogata-3] Fukuma-cho, Yatsunami (S. Watanabe, 1983, TNS)
 [Nogata-4] Koga-cho, Taniyama (S. Tsutsui, 1984, TNS)
 [Dazaihu-1] Iizuka-shi, Dainichi temple (S. Tsutsui, 1982, TNS)
 [Dazaihu-3] Shinokuri-cho, Yamate (S. Tsutsui, 1976, TNS)
 [Amaki-1] Amaki-shi, Akizuki, Fuh-fu-iwa (H. Inoue, 1976, TNS)
 [Amaki-2] Amaki-shi, Minagi (S. Kurashige, 1976, TNS)
 [Kurume-1] Tanushimaru-cho, Kuma (S. Tsutsui, 1982, TNS)
 [Kurume-4] Hirokawa-cho, Kami-hirokawa (S. Masumura, 1966, TNS)
 [Yamaga-1] Tachibana-cho, Yamanaka (S. Tsutsui, 1981, TNS)
 [Fukuoka-3] Fukuoka-shi, Higashi-ku, Shika Isl. (S. Tsutsui, 1975, TNS)
 [Sefuri-yama-1] Nakagawa-cho, Ichinose (S. Tsutsui, 1985, TNS)
 [Hamazaki-3] Nijo-cho, Mt. Uki-dake (T. Hirano, 1983, TNS)

Saga pref.

- [Saga-1] Kita-shigeyasu-cho, Chiguri (Y. Kuranari, 1981, TNS)
 [Hamazaki-2] Fuji-cho, Shimo-osoe-kawa (Y. Kuranari, 1969, TNS)
 [Hamazaki-3] Shichiyama-mura, Imasaka, Takeo shrine (Y. Kuranari, 1982, TNS)
 [Takeo-1] Taku-shi, Taku-cho, Kishikawa (Y. Kuranari, 1982, TNS)
 [Takeo-2] Ushizu-cho, Tokawa temple (Y. Kuranari, 1975, TNS)
 [Takeo-3] Imari-shi, Okawa-cho, Tachikawa-hondani (N. Niwaki, 1981, TNS)
 [Takeo-4] Takeo-shi, Asahi-cho, Nakano (N. Niwaki, 1979, TNS)
 [Kashima-3] Ureshino-cho, Shikinami (T. Baba, 1963, TNS)
 [Kashima-4] Kashima-shi, San-gochi (T. Baba, 1975, TNS)
 [Karatsu-1] Karatsu-shi, Sashi (Y. Tanno, 1976, TNS)
 [Karatsu-2] Kitahata-mura, Yamabiko (M. Kawanami, 1976, TNS)
 [Karatsu-3] Bizen-cho, Shinkyu (Y. Kuranari, 1970, TNS)
 [Karatsu-4] Imari-shi, Hatatsu-cho, Benga (M. Kawanami, 1983, TNS)
 [Imari-1] Imari-shi, Ima-dake (M. Sadamatsu, 1976, TNS)
 [Imari-2] Yamauchi-cho, Sangen-zaka (Y. Kuranari, 1982, TNS)
 [Imari-4] Nishi-arita-cho, Karafune-yama (Y. Kuranari, 1978, TNS)
 [Souki-2] Ureshino-cho, Kami-iwaya, Shimizu (H. Koike, 1975, TNS)

Nagasaki pref.

- [Isahaya- 2] Takaki-cho, Kozu-kura (S. Koga, 1985, TNS)
 [Isahaya-3] Takaki-cho, Todorokino-taki waterfall (S. Koga, 1985, TNS)
 [Hizan-ohama-1] Chijiwa-cho, Kizu (S. Koga, 1985, TNS)
 [Hizen-ohama-3] Iimori-cho, Kobana (S. Koga, 1985, TNS)
 [Katsumoto-1] Ashibe-cho, Moroyoshi-nakafure, Ryuzo temple (S. Tsutsui, 1980, TNS) 64
 [Katsumoto-4] Gono-ura-cho, Konya-cho (T. Shinagawa, 1969, TNS)
 [Imari-3] Sechibaru-cho, Kurikoshi-men (S. Koga, 1985, TNS)
 [Souki-2] Higashi-sonogi-cho, Ryuto-sen (S. Koga, 1985, TNS)
 [Nagasaki-1] Nagasaki-shi, Une-betto (S. Koga, 1985, TNS)
 [Nagasaki-2] Nagasaki-shi, around water supply of Onokura (S. Koga, 1985, TNS)
 [Nagasaki-3] Nagasaki-shi, Inasa-yama (S. Koga, 1985, TNS)
 [Nagasaki-4] Shikao-cho, around mid stream of Shikao river (S. Koga, 1985, TNS)
 [Sasebo-2] Kosasa-cho, Kosaka-men, Shinden (S. Koga, 1985, TNS)
 [Sasebo-3] Kosasa-cho, Takekoba (S. Tsutsui, 1983, TNS)
 [Sasebo-nanbu-1] Sasebo-shi, Fukuishi-kannon (S. Koga, 1985, TNS)
 [Sasebo-nanbu-2] Saikai-cho, Nakaura (B. Matsubayashi, 1963, TNS)
 [Kamiura-1] Seihi-cho, Torikago (B. Matsubayashi, 1961, TNS)
 [Izumi-2] Kami-tsushima-cho, Izumi (S. Tsutsui, 1979, TNS)
 [Fukue-3] Fukue-shi, Kokuzou to Takada (S. Tsutsui, 1980, TNS)

Oita pref.

- [Sagano-seki-1] Sagano-seki-cho, Takashima (Y. Takaoka, 1981, TNS)
 [Usuki-2] Tsukumi-shi (M. Hadano, 1962, TNS)
 [Usuki-4] Yayoi-cho, Mt. Shakuma (M. Hadano, 1960, TNS)
